Transforming people lives through Financial Education

1,831,649 Financial Education Programs distributed

I really enjoyed the program. I truly believe it should be mandatory for all graduating High School Seniors to have this before they go out on their own. The information is so basic but necessary and would be helpful to making positive life decisions. It seems to me that we have to take a course and have practice sessions as well as pass a test to get a driver's license but not to participate in life. Starting out with basic goals and knowing how to manage a budget would have made a major difference in my life both how I prepared for it and lived it. I believe there would be a lot fewer people in debt, on government rolls and declaring bankruptcy had we had this information at a much earlier age. What you gave me here was so much common sense, but I was so busy just living my life that I never took advantage. It is great to know it is never too late. Thank You.

Full of useful information - and worth the investment in time and effort. I'm glad I took the course.

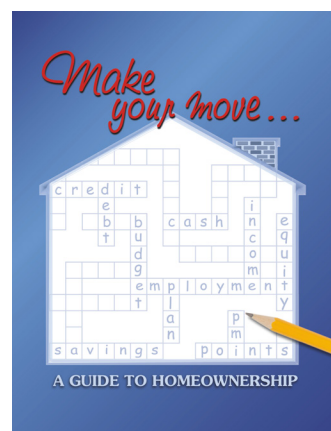

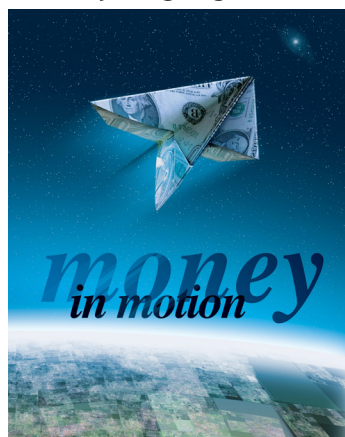

Thank you so much for providing such an amazing course! I have learned so much and am ready to take on my finances head on!

I learned some very valuable ways of managing my finances and especially about creating my own budget, setting goals and ways to make my financial future successful.

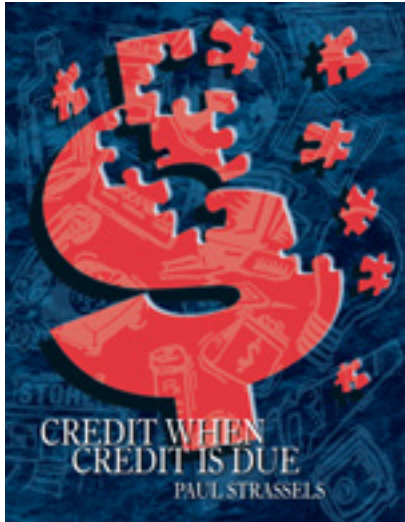

I really enjoyed taking this. I have learned so much and it has really been helpful. Now I feel more confident about buying a home. I will know a lot more of what I'm doing, and I know I will be doing it right.

This program is amazing and very informative. I love that it is at your own pace!! This course should be included and mandatory in high schools all over. It will help young people with knowledge on debt and home purchasing. Thank you for having this available especially with the flexibility.

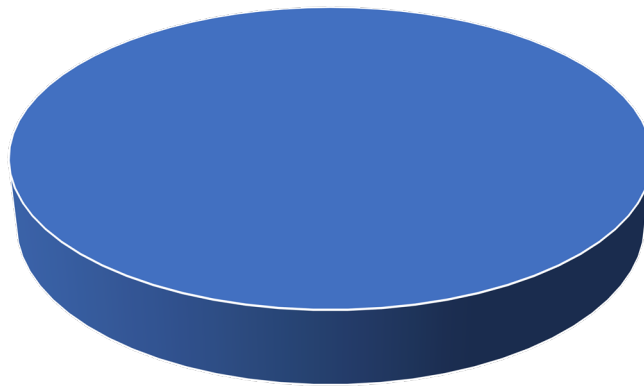

This is a wonderful program. I believe this program should be offered to our senior high school students in every state and required to graduate high school. If I had this knowledge years ago maybe I wouldn't be 45 just attempting to buy my first home and/or property. Please continue offering this knowledge and find more ways to spread to the younger generation regardless if they are ready to be homeowners or not.
